innovation and finance are in a symbiotic and twin track relationship a well functioning financial system spurs innovation by identifying and funding stimulating entrepreneurial activities which trigger economic growth innovations also open up profitable opportunities for the financial system these mutual dynamics cause and need innovative adaptations in the financial system in order to better deal with the changing requirements of a knowledge based economy the volume comprises different contributions which focus on the central imperative of this evident connection between financial markets and innovation which despite its importance is only barely considered in academia as well in practice so far the book is about the mutual interdependence of innovation processes and finance this interdependent relationship is characterized by a high degree of complexity which stems on the one hand from the truly uncertain character of innovation and on the other hand from the different time scales in both domains whereas innovation processes are long term and experimental financial markets are interested in shortening time horizons in order to optimize financial investments economies which do not manage to align the two realms of their economic system are in danger of ending up in either financial bubbles or economic stagnation the chapters of this book deal with different aspects of this complex interrelationship between innovation and finance highlighting for example the role of stock markets venture capital and international financial transactions as well as the historical co development of the financial and industrial domains thus far the communities in economics dealing with both issues are almost

completely disconnected the book brings together economic research dealing with the interface between innovation and finance and highlights the importance of the neo schumpeterian perspective this topic is of particular interest in the current economic crisis affecting the eurozone and its currency most of the policy instruments discussed and implemented so far are focused on short run targets this discussion of the relationship between innovation and finance suggests a long run perspective to create new potentials for economic growth and a sustainable way out of the economic crisis

more and more vehicles are being electrified mobile working machines and heavy trucks are not excluded and these machines are often hydraulically intense electrification entails new requirements for the hydraulic system and its components and these requirements must be taken into consideration hydraulic systems have looked similar for a long time but now there is an opportunity to advance many things change when a diesel engine is replaced with an electric motor for example variable speed control becomes more relevant electric regeneration becomes possible and the use of multiple prime movers becomes an attractive alternative the noise from the hydraulic system will also be more noticeable when the diesel engine is gone furthermore the introduction of batteries to the system makes the energy more valuable since batteries are heavy and costly compared to a diesel tank therefore it is commercially viable to invest in the hydraulic system this thesis revolves around the heart of the hydraulic system that also is the root of all evil that is the pump traditionally a pump has had either a fixed displacement or a continuously variable displacement here the focus is on something in between namely a pump with discrete displacement the idea of discrete displacement is far from unique but has not been investigated in detail in combination with variable speed before in this thesis a novel design for a quiet pump with discrete displacement is presented and analysed the results show that discrete displacement is relevant from an energy perspective for machines working extensively at high pressure levels and with low flow rates and that a few discrete values are enough to make a significant difference however for other cycles the possible energy gains are very limited but the discrete displacement can be a valuable feature if downsizing the electric machine is of interest

The years 2017-2019 witnessed a fascinating period in cinema, marked by significant shifts in storytelling, technological advancements, and audience preferences. This period wasn't defined by a single style, but rather a diverse range of films reflecting evolving societal concerns and artistic experimentation. This article breaks down key trends and highlights notable examples to provide a simplified understanding of this era of filmmaking.

I. The Rise of the Superhero Genre (and its Variations)

This period saw the superhero genre reach unprecedented heights, both critically and commercially. Marvel's Cinematic Universe continued its dominance, releasing films like *Black Panther* (2018) – a groundbreaking cultural phenomenon – and *Avengers: Endgame* (2019), which became the highest-grossing film of all time at its release. However, the era also demonstrated a growing complexity within the genre. Films like *Logan* (2017) and *Joker* (2019) offered darker, more character-driven narratives, moving beyond typical superhero archetypes and exploring mature themes. These films showcased the genre's capacity for nuanced storytelling, beyond simple good versus evil tropes.

II. Nostalgia and Reboots: A Trip Down Memory Lane

The late 2010s also witnessed a significant resurgence of nostalgia, with numerous reboots, remakes, and sequels to classic films and franchises. Examples include *It* (2017), a highly successful adaptation of Stephen King's novel, and the *Star Wars* sequel trilogy, which attempted to bridge the gap between the original trilogy and a new generation of fans. This trend reflects a desire for familiarity in an increasingly uncertain world, providing audiences with comforting revisits to beloved stories, though not always successfully. The success or failure often depended on how well the new interpretations respected the original source material while adding something fresh.

III. The Power of Diverse Representation

2017-2019 saw a push towards greater inclusivity and representation in film. Black Panther, as mentioned previously, was instrumental in showcasing a predominantly Black cast in a major blockbuster, resonating powerfully with audiences worldwide. Similarly, films like Crazy Rich Asians (2018) and To All the Boys I've Loved Before (2018) featured predominantly Asian and Asian-American casts, respectively, demonstrating the growing demand for diverse storytelling and on-screen representation that accurately reflects the world's population. This trend wasn't limited to race; LGBTQ+ representation also saw increased prominence in this period.

IV. The Impact of Streaming Services

The rise of streaming services like Netflix, Hulu, and Amazon Prime Video significantly impacted the film industry during this period. These platforms offered a new avenue for distribution, allowing independent films and international cinema greater visibility. While this led to a broader range of films available to viewers, it also posed challenges to the traditional theatrical release model, altering how films were marketed and consumed. Netflix's original films, such as Roma (2018), gained critical acclaim and even Oscar nominations, highlighting the growing influence of streaming platforms on filmmaking.

V. Technological Advancements in Filmmaking

Technological advancements continued to shape filmmaking during this period. High frame rate (HFR) technology gained further traction, although its adoption remained debated. Virtual reality (VR) and augmented reality (AR) technologies also started to explore applications within the film industry, hinting at potential future innovations in storytelling and immersive experiences. The improved CGI technology continued to push the boundaries of visual effects, allowing for more realistic and fantastical depictions. Key Takeaways: The superhero genre reached peak popularity but also showed signs of creative evolution. Nostalgia played a major role, influencing reboots and sequels. Diverse representation became increasingly important in films. Streaming services fundamentally altered the distribution and consumption of movies. Technological advancements continuously pushed the boundaries of cinematic possibilities. Frequently Asked Questions (FAQs): 1. What were the most

critically acclaimed films of 2017-2019? Several films garnered widespread critical acclaim, including *Get Out* (2017), *Roma* (2018), *Spider-Man: Into the Spider-Verse* (2018), and *Parasite* (2019). The exact "best" is subjective and depends on individual preferences. 2. Did the box office success of films reflect critical acclaim? Not always. While some films were both critically acclaimed and commercially successful (e.g., *Black Panther*), others were box office hits despite mixed critical reviews, and vice versa. 3. How did the rise of streaming affect the theatrical experience? The rise of streaming provided more readily available content, impacting theatrical viewership, but the theatrical experience still holds cultural importance for many, providing a communal and immersive viewing experience. 4. What were the biggest box office hits of this period? *Avengers: Endgame*, *Avatar* (re-release), *Black Panther*, *Aquaman*, and *Captain Marvel* were among the highest-grossing films of this era. 5. What are some key differences between the films of this period and those of previous years? The shift towards greater diversity on and off screen, the rise of streaming services as a major player, and the continued evolution and complexity of the superhero genre stand out as significant differences.
